3: Anonymous U-4 (no date) 1920 RH1 Caucasia RH1

Grozni, and Ekaterinodar, and, on a smaller scale, at Armavir. There are a number of large refineries at Black Town, near Baku, where crude oil is refined to produce kerosene. In 1914 the oil products received from the stills amounted to 4,354,000 tons, while in 1916 there were nearly 5,000 men employed. At Ekaterinodar the oil from Maikop is treated, and the decline in the production from that field has greatly reduced the industry there.

Potash is made in Kuban from sunflower stalks, and in 1910 a combine of eighteen firms of potash manufacturers was formed. The industry has doubtless been affected by the decline of sunflower cultivation (p. 54).

Of the *textile industries*, which are in a very backward state, silk-weaving and carpet-making are the most highly developed. Silk is woven at Tiflis, and since the revival of sericulture, steam silk-mills have been started at Shusha and in the Elisavetopol Government. Felt and carpets are made at home by women—chiefly at Shusha, but also at Akhaltsikh, Akhalkalaki, Gadrut, Kasapet, and Kubrassy—with wool bought from the Tatars. Both hand-knitted and woven woollen goods are made. Cotton is spun at Tiflis and Akhaltsikh, and a rough cotton stuff called *khami* and a little linen of indifferent quality are woven by hand.

There are seventeen *tobacco* factories in Caucasia, six being in Tiflis, four in Kuban, two in Daghestan, two in Baku, two in Sukhum, and one in Terek. The industry is controlled by a dozen large firms, and the output in 1914 was 2,395 tons.

Wine-making and Distilling.—There is a good deal of wine made, especially in the Province of Kutais; the best quality is produced in the Gelendjik district, and Echmiadzin is one of the great centres. The best known type of wine is the Riesling. At Abrau, a Crown estate near Novorossiisk, is made the Abrau-Dursan champagne, which is considered equal to a good French champagne. The total output of wine in Caucasia was 27,449,350 gallons in 1911 and nearly
